Experience

Junior UI/UX Developer at Werq Labs pvt ltd   SEP 2023 – PRESENT

- As a Junior UI/UX Developer, I contributed to creating seamless, user-friendly web pages and interfaces for applications by blending creativity, technical skills, and a user-centered approach.
- What I did:
  - Designed and developed wireframes, prototypes, and high-fidelity layouts to align with user needs and business goals.
  - Developed responsive and interactive web pages using modern front-end technologies and frameworks.
  - Collaborated with product managers and developers to implement user-centered design solutions.
  - Conducted usability testing and gathered user feedback to refine designs for optimal performance.
  - Ensured designs adhered to industry standards, accessibility guidelines, and best practices.
  - Utilized problem-solving skills to address design and development challenges effectively.

Recent Projects

Survey & Feedback Application

Designed and developed a versatile survey builder application, empowering users to create and customize surveys across various domains. The application provides extensive customization options, supporting diverse answer formats such as radio buttons, checkboxes, dropdowns, star ratings, and scales to suit different use cases. Integrated robust distribution methods, enabling surveys to be deployed seamlessly via tablets, kiosks, web links, and QR code scanners, ensuring accessibility and convenience for end users. This project enhanced the flexibility and usability of the survey creation process, catering to a wide range of feedback collection scenarios.

SIAA - Sentiment Integrated Automated Assessment

Developed an AI-powered recruitment application to optimize HR and candidate workflows. The application parses resumes to auto-fill candidate forms, supports task management, and facilitates diverse interview formats, including AI-based and avatar-led sessions. It dynamically assigns skill-specific question sets and uses sentiment analysis to evaluate candidates' facial expressions and voice modulations, providing valuable insights for HR to review interviews effectively.

BotXpert

Developed a versatile application enabling users to create AI-driven agents and chatbots tailored for diverse domains. BotXpert empowers users with customizable configurations and intuitive workflows, allowing the deployment of intelligent bots capable of handling tasks and conversations across numerous industries and use cases. The platform enhances efficiency and engagement by providing seamless chatbot creation and management.
